

Star Performance Hitch Comments

We have collected and written some of the comments we have received from customers who own and use the Star Performance Hitch. We look forward to hearing what you have to say. Thank you!

- Works like Grandma's glider rocking chair. Uses opposing forces of gravity to operate.
- Smoothest and best ride ever for you and your cargo!
- Eliminates stress; fatigue; and wear at the Hitch point
- Use the Star Hitch. Don't haul a \$10,000 horse with a 10 cent hitch.
- Try one and you'll own one.
- The Hitch can pay for itself by what it saves on wear and tear on your vehicle and the trailer.
- Eliminates stress on vehicle driveline, rear ends, u-joints, transmission, and brakes on both the vehicle and trailer. Reduced stress lengthens the life of your vehicle and trailer.
- Amazingly smooth ride. You have to look back to know you're still pulling the trailer.
- Swing arm in hitch will allow you to get rolling easier in mud. No jolt when you back into a chute.
- Lessens stress cracks and welding repairs and eliminates the jerk and jar that can shake the rivets out of the trailer. Saves on costly repairs.
- Built for long life with minimum maintenance. No springs, airbags, compressors, shock absorbers, air lines, bearings, seals, or parts that wear out and need replacing.
- Not only eliminates shock and stress on vehicle and trailer, but protects your cargo as well.
- You can cross over a railroad track, bump, street dip, curb, or cattle guard and you won't feel the effect when your trailer crosses.
- Livestock stand on all four quarters instead of leaning forward; normal pulling stress is gone!
- Simple to install; easy to maintain; and engineered with safety in mind
- You can't describe the ride as good as it is!
- The best money I ever spent for towing and hauling!
